

## ABSTRACT

It is an object of the present invention to provide special  
5 effects which will make a video game more realistic.

When a virtual light source exists in a three-dimensional  
virtual space, if a light from the light source extends toward a  
camera, a flare is generated on a screen because of incidence of  
10 the ray of light into a camera lens, thereby forming a dazzling  
picture in accordance with the state of backlight.
